

Care instructions

Hammerglass® is coated with a very hard surface layer of silicone oxide. Just like ordinary glass it is highly recommended not to use sharp tools or objects that can cause scratching when cleaning.

Cleaning

As basic cleaning agent, a solution of lukewarm water with a mild household detergent is recommended. Use only soft micro fibre cloths/soft sponges or rubber window scrapers free from harsh abrasives. Graffiti can be removed with solvent products as isopropanol or white spirit. Acetone should be avoided.

Anti-static treatment

In common with all plastic materials, Hammerglass® tends to build up a static charge. If needed, we recommend to wipe off the screen with a solution of regular fabric softener and water, immediately after installation.

Weather conditions

Exposure to weather and wind will not cause Hammerglass® to lose its impact strength, within a period of 10 years from the date of purchase. Hammerglass® will not show any discolouration or surface damage caused by weather conditions, within a period of 5 years from the date of purchase.

If Hammerglass® is in any way affected, please contact our dealer or Hammerglass AB directly.
